NATURAL STONE AND INDUSTRIAL RAW MATERIAL PRODUCTION

> **We produce the raw material of cement with the responsibility of leaving every site usable tomorrow.**

A production approach that handles natural resources with operational discipline and environmental responsibility: limestone, quarry and aggregate activities.

WHAT WE DO

- Limestone, quarry and aggregate activities
- Product suitability, technical properties and delivery capacity assessed per request
- Site and documentation questions handled with the relevant team

SHARE FOR A QUOTE

- Intended use and, if available, the technical specification
- Quantity, period and delivery address
- If you need analysis reports, permits, reserve or capacity information: the relevant site and period
- For a visit request: participants and purpose

Cement raw material, concrete aggregate and fill material cannot be compared with the same recipe; the conditions of one product or site are not generalised to other activities.
